Patent and Trademark Office	Action Summary	Part of Paper No. 8

Application/Control Number: 09/753,431

Art Unit: 2877

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 20 is rejected under 35 U.S.C. 102(b) as being anticipated by well-known knowledge in the art, as characterized by the discussion of prior art in the instant specification.

Claim 20 is a product-by-process claim, defining a product, a digital image comprising a plurality of digital pixel values residing on a computer readable medium, in term of a process of producing the product, with process steps of capturing in a particular manner and adjusting based upon the capturing.

A product by process claim is not limited to the process, but only to the result of the process; see MPEP 2113.

Here the product is clearly known in the art. The product is nothing more than a series of digital pixel values on a computer readable medium. Digital images in the form of pixel values stored on a medium readable by a computer are known in the art; the instant specification, in discussing the prior art on page 2, notes that prior art systems used "digital image data".

Application/Control Number: 09/753,431

Art Unit: 2877

1

Page 3

There appears to be no way in which the digital image data or the sort known in the art can be examined and, from that examination, a determination made as to whether or not a correction was made by the claimed method or another method, or, for that matter, if a correction was made at all. Thus the method steps do not limit the image in a patentable manner.

- 3. It appears that claims 1-19 and 21-23 are allowable. The art does not appear to teach or suggest the claimed system and method, in particular a system or process for capturing data form light from an unexposed area of a film illuminated by a light source while the film has a developer chemical applied thereto and using this data to image data from the film for sensor and illumination non-uniformities.
- 4. Kachelries (US 4,345,831) shows a system in which there is a photodetector responsive to the intensity of the light source to generate a background level for correction of data from a film being developed to correct for possible variations (non-uniformities) in the light source or the photodetector response (column 3, lines 9-10). The reference does not appear to teach or suggest using data based upon reflectance from an unexposed area of film while developer solution is applied to it, rather, the signal is representative of the signal when no film is present; for example, see claim 1 of the reference.

Art Unit: 2877

- 5. Papers related to this application may be submitted to Group 2800 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The fax number is (703) 308-7722.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to R. A. Rosenberger whose telephone number is (703) 308-4804. The examiner's normal work schedule is 8:00 to 4:30 eastern time, Monday through Friday.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0956.

R. A. Rosenberger 30 May 2003
